Methodology

WPA Intelligence conducted a study of Republican primary voters in Nevada.

WPAi selected a random sample of registered voters from the Nevada voter file using Probability Proportionate to Size sampling (PPS) using a recently built turnout model. The sample for this survey was stratified based on geography, age, gender, and partisanship. This methodology allows us to avoid post-survey “weighting” which can reduce the reliability of survey results.

Respondents were contacted by phone via a live telephone operator interview April 24-26, 2022. The study has a sample size of n=503 Republican voters with a margin of error of $\pm 4.4\%$ in 95 out of 100 cases.
